A "Readi-Cut House" at a Glance

We sell you a Substantial, Warm, Comfortable, Attractive House, COMPLETE, readi-cut to be nailed together and occupied, for less than you can buy the rough material.

What You Get

- Sills, cut to fit.
- Floor and ceiling joists, cut to fit.
- Rafters, all accurately cut to fit.
- Wall and partition studding, cut to fit.
- Gable studding mitred to slope of rafters.
- Sheathing lumber for outside walls.
- Siding, tongued and grooved, cut to fit, and bundled.
- Gable siding, bevelled to fit, and bundled.
- Sheathing for sub-floor and roof.
- Flooring, matched and bundled.
- V-Joint Sheathing for porch ceiling and cornice, bundled.
- Shingles, XXX British Columbia Cedar, or Patent Roofing.
- Porch flooring, cut to fit and bundled.
- Porch columns, porch joists, hand-rail and balusters.
- Steps for front and rear, cut to fit and bundled.
- Outside finishing lumber, cut to length, bevelled or mitred, and bundled.
- Moulded base board and quarter round for interior walls.
- Weather moulding for outside trim of doors and windows.
- Crown mould, bed mould, cove mould, etc.
- Stairways for all two storey houses, with the necessary newels, hand-rails and balusters, bundled.
- Doors for all openings with frame, and trim both sides, cut to fit and bundled.
- Windows with sash, glass, frame and trim cut to fit and bundled.
- All hardware, including mortise locks, knobs, hinges, window fittings, galvanized iron flashings and building paper.
- Nails of proper size for the entire house.
- Best readi-mixed paints for two coats for the woodwork (inside and outside), any color.
- Putty, oil and shellac.
- Plaster board, fibre board, or lath and plaster, to finish the interior walls.

Complete Plans and Plain Instructions for Erecting the Building

Recent Development in Building Construction

*The story of the Wonderful Progress made in TEN Years.
A Record of Achievements. How Old-Fashioned Methods
have been Replaced. What the Modern System Means.*

SINCE the dawn of recorded time, men's minds have lead them to follow in the footsteps of their ancestors. The Weavers' Riots were precipitated by such men; men to whom the old way, if not the best way, was at least good enough; who thought the march of progress was a thing to be prevented at all cost. And so, till the past ten years, methods of building construction remained much as they were when King Solomon built his Temple. It was this condition which inspired Kipling's

"I tell this tale which is strictly true,
Just by way of convincing you
How very little, since things were made,
Things have altered in the building trade."

A few years ago it occurred to a man of a different type, that if steel construction buildings could be manufactured in the shop, ready to be assembled where they were wanted, it should be equally possible to prepare the materials for frame buildings, in a mill equipped with accurate, labor saving machinery, which did not blunder, forget or make mistakes.

And so the "Readi-Cut" house system was born, and another, and this time peaceful, revolution was started.

THE CLUB HOUSE, BOWRING PARK, ST. JOHNS, NEWFOUNDLAND.
SUPPLIED READI-CUT BY THE SOVEREIGN CONSTRUCTION CO.

This is the Tenth Year of the "Readi-Cut" Success

READI-CUT HOUSES—the Sovereign System of construction—may be new to you, but it was planned and put into operation ten years ago. Its merit and wonderful simplicity were immediately recognized by the public, and the result is that each year the History of the business shows a doubling in the volume and number of houses sold.

This wonderful growth would be impossible in any manufacturing, or other business, unless customers became friends. Unless real service was rendered, Unless honest value, square business methods, and integrity—prevailed, Unless every customer was satisfied.

A Handsome, Comfortable Home

A "Readi-Cut House" when finished is exactly like any other well designed, well constructed frame house. It cannot be taken apart except as you would tear apart any good house. The difference between a "Readi-Cut House" and the best house a builder would erect from plans furnished by a consulting architect is simply a difference in where you buy the material, how much you pay for it, and the methods used in bringing it to a finished state.

HOUSING "THE ALBANY" REGINA SASK
SUPPLIED READI-CUT BY THE
SOVEREIGN CONSTRUCTION CO.

The Readi-Cut Idea

In building by the old methods you would probably buy your window and door frames made up—possibly you would have your main and basement stairs partly worked out—you would certainly buy your doors, columns, and newel posts finished, and you would have all your mouldings run at the mill. **That is—you would buy these items readi-cut or partly so.**

The Reason Being—that a mill equipped with modern power-driven machines can do better work at a lower cost than hand-labor. Every bit of work that **can** be done by machines, **should** be so done.

HOMER HOSPITAL AND DOCTORS' RESIDENCE
SUPPLIED READI-CUT FOR THE CONSTRUCTION CAMP ON THE NEW WELLAND CANAL

The Sovereign Construction Company Supply Your Whole House Readi-Cut

WE make the same percentage of saving for you on your whole bill, that you now hope to make on a few items.

It is the System which has made the great structural steel buildings possible—applied to frame construction.

We turn out in our mills, the Complete house, from sills to ridge board, readi-cut to fit.

We include all paint and the hardware down to the smallest nail or hinge.

We include all the interior wall board or lath and plaster, and the trim.

We include a graphic set of plans on which are indicated the location of every piece of lumber in the house.

We include a set of simply worded instructions which are so plain and comprehensive as to render any skilled supervision of the work unnecessary.

We sell you this complete house ready to be nailed together and occupied for less than you can buy the rough material locally.

The work involved in the erection of the house is two-thirds done when the house arrives on the building site.

We save you two-thirds of the actual labor and cut in half the cost of the one-third that remains.

The work of placing the material can be done by any man who can read and drive nails.

We save you one-third on the finished house.

Where the Saving Comes In

FIRST—We buy raw materials in large quantities, at the lowest prices obtained by big Manufacturers.

SECOND—We buy for cash and cash commands a premium at all times.

THIRD—We do not sell on credit and have no 5% or 10% for Bad Accounts charged in the prices of our houses.

FOURTH—We eliminate high priced hand labor entirely. In our mills we use high speed automatic machinery—and cheap labor.

The cheapest labor is quite good enough to put the material in place after it arrives on the building site.

FIFTH—We do in our mills, two-thirds of the actual labor.

SIXTH—We cut in half the cost of the labor that is still necessary. A two dollar a day man can nail the pieces in place where it would require a four dollar man to fit them.

SEVENTH—We do by machinery in our mills, the cutting planing and sanding that would ordinarily be done by the most expensive hand labor, on the job.

The purchaser of a **READI-CUT HOUSE**[®] buys and pays for exactly enough material to build his house, plus a small addition to guard him against delay due to any unfortunate accidents on the job.

EIGHTH—We eliminate the waste pile. Around every completed house built by the old methods there accumulate piles of waste material.

This is due to four causes—

- (1) Careless designing.
- (2) Careless figuring of quantities.
- (3) Careless use of unsuitable lengths.
- (4) Careless errors in cutting.

Other Points of Readi-Cut Economy

No Costly Delays

READI-CUT HOUSE, PHOENIX, ARIZONA. BUILT BY THE READI-CUT SYSTEM.

In building by ordinary methods there is always an annoying and costly series of delays due to failure of material to arrive on time, materials being unsuitable when they do arrive, insufficient quantities being ordered, etc.

Under the **Readi-Cut System** your house is delivered complete in one shipment and you will not at any time have your workmen idle for lack of material to work with.

Economy of Design

A POINT in frame building design which is commonly overlooked, is that all lumber is sold in certain stock lengths—by keeping this in view when plans are being drawn, a great deal of waste can be avoided.

FOR INSTANCE:—A house 24' 0" long is usually quite as satisfactory as one 24' 3" long, and is much more economical.

A window or door placed six feet from a side wall will look quite as well as it would six feet one inch from the wall, and will not involve any waste of siding or sheathing.

You would not increase the width of a room from 13' 6" to 13' 8" if you knew that it made it necessary for a couple of dozen second floor joists to be increased two feet in length.

Careless Designing easily wastes 18% of the material.

This is One of the points on which we specialize "Design for Economy in Cutting."

No Charge for Plans and Supervision

A consulting architect would charge you from five to ten per cent. of the estimated value of your house, for the drawing of the plans and for the work of supervising the erection.

We reduce the cost of plans to a negligible quantity by dividing it among a hundred or more purchasers of the same style of house.

Our plans, instructions, and our "Readi-Cut" method, make any expert supervision unnecessary.

No Bill for Extras

You know before you invest a Dollar, just what the complete house is going to cost you, and you are not called upon in the end to pay a big bill of extras which commonly is put in at the last moment to swell the contract price.

The Materials We Use

Lumber

Every piece of lumber in a "Readi-Cut House" has been carefully selected from thoroughly seasoned first-class dry stock, especially selected for quality. It is inspected by experienced men, and if not up to a high standard is not used. This is an extremely important point, and you should consider it carefully. Our facilities for buying high grades are unexcelled by any manufacturer in the country. This means much to the purchaser—to know that all the materials are the best, that they are well seasoned, sound, and of first quality throughout. All trim material is No. 1 White Pine and in common with Doors, Sash and Stairs is given a beautiful finish. Fir is supplied in place of Pine in shipments from our Vancouver mills. You will have absolutely no cause for complaint of any of the materials supplied you. Can you say as much of those that can be purchased in your neighborhood?

Hardware

Our hardware comprises nails of all sizes and kinds required in doing a first-class job of work—double diamond glass for windows and glass doors—galvanized iron flashings for hips, valleys, and window and door openings—window and door hardware in oxidized old copper, or other tasteful finish of suitable size and pattern.

Paints

For all our houses we supply the very best quality of readi-mixed paints or stains manufactured or sold in Canada—pure linseed oil—orange shellac—and where specified, the best quality of shingle stain.

METHOD OF APPLYING PLASTER BOARD.

METHOD OF CONSTRUCTION.

Readi-Cut Plaster Board

This is the greatest single achievement of the builders' craft in the last generation. It gives absolute protection against extremes of temperature, saving more than 15% of the cost of heating—is air and vermin proof—and practically sound proof—can be cut with an ordinary saw to fit any space and is easily and quickly put on by anyone who can drive nails. Will not crack with age, nor loosen with dampness. A special filler is supplied to fill the joints, giving a smooth perfect wall which can be papered or given a putty coat as preferred.

Fibre Board

Readi-Cut Fibre Boards of any standard make, with suitable nails for placing them, will be furnished with any of our houses at the prices listed.

Lath and Plaster

Lath and prepared hard wall plaster and material for putty coat supplied at the purchaser's option on any of our designs, in place of plaster board or fibre board.

Our Method of Construction

We furnish double floors with building paper between for the ground floor of all our dwellings, and our outside walls, as shown by accompanying cut, are the last word in building construction. A plate is laid on the sub-floor and studding is set on this so that when the sheathing, builders' paper, and matched siding are placed on the outside of the studding, and the plaster board, lath and plaster, or fibre board, on the inside, the spaces in the wall between the studs are air-tight chambers which insulate the building from extremes of hot and cold weather better than solid brick. This construction, known and approved by the Building Departments of the Cities, and the Insurance Companies, as a fire stop construction, prevents the circulation of air in the walls, and is ample to make our dwellings warm in the coldest climate.

General Specifications

FOR houses on post foundations, we supply three sills lengthwise and one at each end. For masonry foundations a heavy centre sill only.

Sills range from 6 in. x 6 in. to 10 in. x 12 in.

Joists are from 2 in. x 6 in. to 2 in. x 12 in. according to the size and weight of the building and are all accurately sized.

Studding and Rafters are 2 in. x 4 in. to 2 in. x 6 in. dressed on two sides. Rafters are all collar tied.

Spacing of joists, studding, rafters, etc., is all on sixteen inch centres with an occasional exception in the case of porch joists or porch rafters.

Ceilings are from 8 ft. to 9 ft. high, and are square, with the exception of some storey and a half dwellings, which have a hipped ceiling on the second floor.

Outside walls are covered with sheathing, building paper and matched siding.

Where we furnish houses for brick veneer, stucco, or metallic siding, we supply $\frac{7}{8}$ in. tongued and grooved sheathing, cut to fit, to cover the outside walls, and in case of building for stucco finish, we supply the necessary metal lath.

For the roof we supply $\frac{7}{8}$ in. roof boards, building paper, and best cedar shingles, or $\frac{7}{8}$ in. roof boards and patent roofing.

Hardwood floors of clear grade maple or birch are furnished at an extra charge of \$3.50 per square (100 square feet).

Base boards are O.G. moulded or bevelled.

Quarter round moulding is supplied to finish the lower edge of the base.

Columns for verandahs and colonnade openings (see illustration) are 5 in. to 10 in. (stave) with caps and bases, except where the design shows square columns.

Front doors are 2 ft. 10 in. x 6 ft. 10 in. x $1\frac{3}{4}$ in. thick, part glass, of the design indicated in the cut of the house.

DESIGN OF COLONNADE
BETWEEN ROOMS
No. 2 SIZE

DESIGN OF COLONNADE
BETWEEN ROOMS.
No. 1 SIZE

Interior doors are $1\frac{3}{8}$ in. thick, cross panel (see illustration, page 10).

Double swing doors are supplied wherever shown in floor plans, and will be put in to replace any single swing door at an extra charge of \$1.40 (see illustration, page 10).

Glass interior doors (French) are also illustrated on page 72.

Mirror doors are supplied where shown on floor plan.

The interior trim for doors consists of bullnosed casing, base blocks, and three-piece Colonial mantel head.

TURNED COLUMN

General Specifications—Continued

Windows are of the design shown in the cuts and are trimmed to match the doors.

Our hardware is oxidized old copper, or other tasteful finish of suitable size and pattern.

We furnish paint of any color, for woodwork, inside and outside, two coats. You may choose as many colors as you wish for body, trimmings, porch ceiling, sash, etc., and stain for shingled walls. We furnish on request, roof shingle stain, at an additional cost of \$1.00 per gallon. One gallon will cover 120 feet of roof surface, brush coat.

The cuts of colonnades No. 1 and No. 2 (page 9) are illustrative of the colonnades supplied where shown on floor plan, between halls, reception rooms, living rooms and dining rooms. Either design will be furnished at the purchaser's option.

Terms of Sale

Delivery made free on board cars at Toronto, Ottawa or Vancouver.

One-third cash with the order and the balance when shipped. This is no reflection on your responsibility, but is our invariable rule and we will not sell on any different terms. A discount of 5% is allowed for all cash with the order. The list price and the net price are both given for each design.

NOTE.—Readi-Cut houses are shipped under the classification of "Lumber" with the hardware, paint, etc., under their respective classifications. You pay freight only on what you use. None on waste.

ANY PURCHASER OF A READI-CUT HOUSE.

Cost of Erection

"WHAT does it cost to erect a 'Readi-Cut' house?" is a question that we are asked daily, and we have to answer that it depends on the industry shown. The materials are all lying bundled and marked before the men, and there is no excuse for any delays or loafing on the job. The materials can be put in place just as fast as nails can be driven.

To make sure that builders work to good advantage, we issue a set of instructions for each building,

covering the placing of material when it is delivered on the ground, the number and class of workmen to employ and the way in which they can work most efficiently.

Below are given estimates of the cost of erecting and painting various types of houses, and in this connection it should be remembered that any part of the work the owner can do himself in his spare time, will be clear saving.

The "Glenora," 30 ft. x 22 ft., will cost about 20% of our price.

The "Glenora" Summer Cottage, 30 ft. x 22 ft., will cost about 20% of our price.

The "Suburban" and other storey and a half houses, will cost 20% to 25% of our price.

The "Ingersoll" and other two storey houses, will cost about 25% of our price.

In making comparisons with these prices, it must be kept in mind that we supply all hardware, glass, paint and interior wall finish and that our estimated erection costs are for carpenter work, glazing, putting hardware in place, finishing interior walls and doing all painting.

ACTON

Ready Cut Six-Room Dwelling, with Bath

Size: 20 x 30 Bldg. \$1152.00 Fin. \$220.40

ONE of the latest designs to meet the demand for a storey and a half house and yet adhere to the graceful bungalow lines so justly popular. Exceptionally good living room and dining room, convenient kitchen and pantry, and stairway from kitchen to grade entrance and cellar. Two large bedrooms and one small one, bath, linen and clothes closets in abundance, make the second floor plan all that could be desired in a house of this size.

Exposed rafters, shingled gables and drenched light windows, as shown, give beauty and individuality to this "homey" home.

Refer to page 10 for specifications and terms.

HASTINGS : HASTINGS No. 1

Ready-Cut Six Room Bungalow, with Bath and Vestibule

The Hastings

The Hastings No. 1

Size	Price	Net Price
24 x 44	\$1071.00	\$1017.45
22 x 44	964.00	915.80

THE "HASTINGS" is a design providing a good verandah without obstruction of light for the rooms of the house. Access from vestibule to the dining room or living room. Plenty of closet and pantry space. Inset rear porch, square or turned columns for verandah. If required for a narrower lot this design will be furnished with a porch extending only to the line of the side wall, but forward of the front wall, as the "Hastings" No. 1.

Refer to page 10 for specifications and terms.

KEITH

	Size.	Price.	Net Price.
Readi-Cut Four-Room Bungalow	22 x 28	\$586.00	\$556.70
Also furnished as a Summer Cottage	22 x 28	442.00	419.90

THE "KEITH" is a small bungalow with a cottage roof belled at the eaves; has all the quality and comfort of larger designs; furnished with balusters for the verandah rail and turned full length columns instead of as illustrated, if preferred.

Refer to page 10 for specifications and terms.

SUMMER COTTAGES

NOWHERE does the "Readi-Cut" system of manufacturing houses apply to better advantage than in the building of "Summer Cottages," which are commonly erected at some distance from towns, where skilled labor is not easily procurable. Local talent, or the purchaser himself, can erect our "Readi-Cut Summer Cottages" without difficulty by following our plans and book of instructions, and it will not be necessary to import mechanics at a heavy expense to do this work.

As "Summer Cottages" are usually built on very unconventional lines, it is always difficult to decide just what designs to illustrate. On the following half dozen pages are shown various types of widely different size, appearance, and price. They are all houses adapted to high-class company, comparing favorably with the best summer cottages in exclusive summer resorts.

Many other designs suited to special requirements are in our files, and will be submitted for approval on request, though not in such general demand as to warrant cataloguing.

In addition we are constantly preparing and submitting special designs of summer cottages, like that shown on page 64, and, if given a hint of what is wanted, are prepared on short notice to submit, without charge, special designs and prices to suit the customer.

Please bear in mind that our "Summer Cottages" are constructed to last for years; they are identical with our winter construction, except that we do not supply interior wall board, sub-flooring, or trim for the interior, and studding, rafters and joists are generally spaced on 24" centers.

The partitions are all of fine beaded or V-joint matched lumber, everything dressed four sides, so that the interior may be oiled, stained,

painted, or left in the natural wood, always presenting a smooth finished surface.

Prices cover all the material needed to make a complete finished summer cottage, including hardware, paint or stain, glass and putty—everything, in short, except founda-

tions, chimney, and such lighting, heating and plumbing fixtures as the customer may elect to use. These vary so widely that we cannot well include them in prices of either winter dwellings or summer cottages.

"Only one letter differentiates the word 'Health' from 'Wealth.' And the things themselves are even more closely related. Every time you get out in the sunshine and laugh and play you are absorbing potential wealth into your being."

Kitchen, Closet and Medicine Cabinets

THE Cabinets illustrated below are not shipped in the knock-down, but are put together in our shops, fitted with their hardware, and delivered ready to be put in service, with the exception of the glass, which, for the sake of safety in transit, is packed and shipped separately. They are made in both Georgia and white pine, but we strongly recommend the Georgia pine, as it will take an oil finish and has a particularly handsome appearance.

No. 1. KITCHEN CABINET is 4 ft. wide, 7 ft. high, and 1 ft. 6 in. deep. It has a shelf and two panel doors below, and four shelves with two glass doors above. In Georgia pine or white pine, complete with glass and hardware. Price, \$13.50 net.

No. 2 KITCHEN CABINET is the same as No. 1, except that it is 5 ft. 6 in. wide and has three panel doors below and three glass doors above. In Georgia pine or white pine, complete with glass and hardware. Price, \$18.00 net.

No. 3 KITCHEN CABINET is 5 ft. 6 in. wide, 7 ft. high, and 1 ft. 6 in. deep. It has in the lower section one shelf with two panel doors, a tilting flour bin, and two cutlery drawers. In the upper section there are four shelves with three glass doors. In Georgia pine or white pine, complete with glass and hardware. Price, \$23.50 net.

MEDICINE CABINET

No. 4 KITCHEN CABINET OR CLOSET CHEST is 3 ft. 6 in. wide, 3 ft. high, and 1 ft. 6 in. deep. It has one shelf with panel door and three large drawers. In Georgia pine or white pine, complete with hardware. Price, \$12.00 net.

MEDICINE CABINET.—This Sanitary Inset Medicine Cabinet is designed to be built into the partition of the bathroom or of a bedroom. The inside dimensions are: Width, 1 ft. 4 in.; height, 1 ft. 9 in.; depth, 4 in. It is fitted with three shelves and a mirror door. In Georgia pine or white pine, complete with mirror and hardware. Price, \$5.50 net.

No. 1 KITCHEN CABINET

No. 3 KITCHEN CABINET

No. 4 KITCHEN CABINET OR CLOSET CHEST

Screen Doors, Screen Sash and Verandah Screens

Our Screens are all made from heavy stock, mortised and glued; the wire netting is tightly stretched over the frame, securely fastened in place, and the edge covered with a neat half-round strip. In a house fitted with a set of our screens the problem of keeping out flies and mosquitoes is settled for a term of from ten to twenty years. These screens should not be confused with those cheap affairs which have to be renewed, if not every season, at least once in three years.

SCREEN DOORS.—Complete with spring hinges. Price, \$3.25 net.

SCREEN SASH.—Full screens for casement windows. Sliding sash windows have screen for lower sash only. Price, \$1.25 net.

VERANDAH SCREENS.—Prices for a complete set of verandah screens for any house quoted on application.

Storm Sash and Storm Doors

Storm doors are made from matched V-joint sheathing, and are fitted with a light of glass. Complete with glass and hardware. Price, \$2.50 net. Storm sash are one and three-eighths inches thick, and are of the best quality and workmanship. We supply these sash either with a lower-rail ventilator, or with patented hangers so that the sash can be opened outward. The latter type has the advantage that they are more easily put on from the inside of the house. In the case of a bungalow where all the windows are on the first floor we would recommend the lower-rail ventilator. Prices for sash, glass, and hardware, complete, range from \$2.00 to \$3.50.

Basement Windows, Basement Door and Basement Stairs

Basement windows are not included in the houses at the prices quoted. Basement door and stairs are only included in the houses, at the price quoted, when they are indicated in the floor plan. As many of our houses are built either temporarily or permanently on post foundations, and as the item of basement windows is one that varies considerably with the needs of the owner, we have found it more convenient to have a separate price list of these fittings.

Basement stairs, adapted to house, with basement door, complete with hardware. Price, \$10.00 net.

Basement windows, single sash, three 10 in. x 16 in. lights; frames for stone, brick, or concrete foundation walls, complete with glass and hardware. Price, \$2.75 net.

French Windows

Probably no other feature adds so much to the bright, airy appearance of a room as a pair of French Windows, either between two rooms, or opening from living room, dining room or bedroom on to a verandah. They can be put in to replace an arch, door or window in any of our designs. Price, complete with glass and hardware, \$16.00. Where they are used to replace an opening of another type an allowance is made which will reduce this price from five to ten dollars.

Sliding Doors and Mirror Doors

An extra charge of \$3.80 net is made where an archway is replaced with a pair of sliding doors.

A panel door fitted one side with a four-foot plate mirror will be supplied in place of any closet door for \$7.50 net extra.

Double Swing Door

This door is included in the house at the price quoted wherever it is indicated on the floor plan, and will be put in to replace any single swing door, in any design, for an extra charge of \$1.50 net.

Shingle Stain

Shingle stain for the roof is not included, but will be supplied in any desired quantity for \$1.00 per gallon. A gallon will cover 120 square feet of roof surface, brush coat.

Hardwood Floors

Hardwood floors, of a fine quality of birch or maple, will be furnished in place of the regular flooring specified, with any of our designs, at an additional cost of \$3.50 per hundred square feet.

Steel Siding and Shingles

We are prepared to supply pressed steel siding or shingles for our houses, in place of wood siding and cedar shingles, and on request will quote prices on any house in our catalogue finished in this way. They are made from 28-gauge galvanized steel, and interlock on all four sides, making them wind, rain, and fire proof. They can be painted, if desired, with paints specially prepared for the purpose.

Dry Earth Closet

This building is commonly sold with summer cottages, or with houses going to outlying districts where the lack of water pressure makes it impossible to supply a fully equipped bathroom. Complete with paint and hardware. Price, \$15.00 net.

Sovereign "Readi-Cut" Cellar Entrance

The accompanying cut illustrates how an enclosed outside cellar entrance can be provided for any of our houses. Many customers prefer to have access to the cellar without the necessity of going through the house, and still do not want to be compelled to go out into the open air to get to the cellar. To such, this attachment will appeal strongly. Price, complete with basement stairs and door, \$30.00 net.

Sovereign "Readi-Cut" Kitchen Additions

To make the designs illustrated more flexible, we are prepared to furnish an assortment of lean-to additions, which are attached to the rear of our houses, increasing the ground floor space, so that other use can be given to the space shown on the floor plan. The accompanying cut shows the finished appearance of the addition.

A window and an outside door are furnished with each building, and they are quoted below both in "summer" and in "all-the-year-round" construction.

COMPLETE bills of material for every description of farm building supplied under the Sovereign System; lumber cut to fit, bundled, and marked with its position in the building; all necessary hardware, nails, flashings, etc.; complete plans and full erection instructions.

“The Twentieth Century Barn”

For many years it has been the practice of farmers, when building a barn, to cut from their own and neighboring properties the many heavy timbers that were required; the framing of the barn required skilled labor at high wages, but when it was taken into account that the timber cost very little the total cost for the barn was not excessive. In time all the available timber was cut off and the farmer was confronted with the proposition of buying square timber at an exorbitant cost, getting it to the building site and having it framed by the highest priced labor; a combination that threatened to make the cost prohibitive.

A New Era in Barn Building

To meet this condition, the Twentieth Century Barn has been evolved, with the heavy truss timbers placed only along the lines of strain, while rafters, diagonal braces, etc., are cut in at frequent intervals in such a way that the whole frame is a truss. We have accomplished the design of a barn of great strength and extreme rigidity with a saving of probably one-half of the lumber that would be used in the old type.

There are five excellent reasons of Economy, Quality and Efficiency, why your New Barn should be a Twentieth Century

FIRST.—You get a scientific barn design which saves half the timber used in the old type.

SECOND.—You get this reduced amount of lumber at rock-bottom prices and of a quality that you will not be able to duplicate in your neighborhood.

THIRD.—All this lumber, before leaving our mills, is cut to fit, bundled, and marked to indicate its position in the building; that is, we do by machinery all the cutting and fitting that would ordinarily be done by high-priced hand labor on the job.

FOURTH.—Our barn is literally "iron clad," as it is shingled with Galvanized Shingles and sided with Galvanized Corrugated Siding.

FIFTH.—We furnish a set of Plans and Instructions so simple and complete that the farmer can erect his own barn without the assistance of a carpenter.

Special Features of the New Design

(See illustrations on next page.)

Heavy columns support the plates which carry the rafters for the lower slope of the roof.

Heavy timber angle braces, strongly trussed to the sills and columns, support the hip purlins. (See Fig. 2.)

The upper pairs of rafters are collar tied and all the rafters are notched to fit the plates. (See Fig. 3.) This makes each set of rafters a complete roof truss.

The heavy framing and the elaborate bracing of the end walls are shown by the broken lines of Fig. 1. The side walls are diagonally braced in the same manner.

Angle braces are spiked across the rafters at each end of the barn to stiffen the roof against the strains due to the load of the hay fork track.

The flooring of the threshing floors is two inches thick, tongued and grooved; the flooring of the mows, seven-eighths inch thick, tongued and grooved.

The roof is sheathed with seven-eighths inch sheathing covered with galvanized shingles.

The outer walls are covered with galvanized corrugated siding.

Remember—All the Framing is done in our Mills

Twentieth Century Barn Details of Framing

Sovereign Construction Co., Limited, Toronto

FLOOR PLAN

The material is cut to fit, ready to be nailed in place

Our Metal Clad Barns are Lightning, Fire, Wind and Weather Proof

NO barn other than a metal clad can properly lay claim to the name "Twentieth Century," for aside from the extra protection against the hazards of lightning and fire, and the high degree to which they are wind and weather proof, there is that most important item, their great length of life, and freedom throughout that life from any expense of painting or repairing.

METAL SHINGLE

GALVANIZED CORRUGATED SIDING

Barn Sizes, Prices and Terms

We quote below prices on half a dozen of the commoner sizes, but will be glad of the opportunity to submit figures on barns to suit any special requirements.

The prices quoted cover all the lumber from sills to ridge, "Readi-Cut," that is, sills, joists, wall plates, bonding strips, flooring, columns and trusses, purlins, rafters, collar ties, roof sheathing, etc.

Also, metal siding, shingles, ridge roll and hip flashings.

All necessary nails, door hangers and track.

Our terms are one-third cash with the order, balance on receipt of shipment. This is not meant as a reflection on your financial standing, but is an invariable rule.

The net price is for all cash with the order.

SIZE	PRICE	NET PRICE
32 feet x 40 feet x 14 foot side wall	\$ 861.00	\$ 818.00
32 feet x 48 feet x 16 foot side wall	1066.00	1013.00
36 feet x 48 feet x 14 foot side wall	1078.00	1025.00
36 feet x 56 feet x 16 foot side wall	1304.00	1238.00
40 feet x 56 feet x 14 foot side wall	1315.00	1249.00
40 feet x 68 feet x 16 foot side wall	1554.00	1476.00

Half the work of erecting the barn is done by power machinery in our mills — the half that would require skilled labor — the framing, cutting and fitting. The owner, with the assistance of a couple of "handy" men, can put the material together on the job.

Stables

BECAUSE of lack of space we are not illustrating our stables, but will mail blue-prints on request, showing floor plan and section through building.

Below we give a general description of our standard designs, so that you will know if we have approximately what you want. If your ideas call for something entirely different, submit rough sketch and description and we will be very glad to quote a figure.

Our stables are all of the gable roof type, with 12 ft. 6 in. side walls. We supply sills, joists, sub-floor, building paper and matched floor. The loft floor is $\frac{7}{8}$ -inch tongued and grooved, so that dust will not sift through into the carriage room. The outside walls are covered with $\frac{7}{8}$ -inch tongued and grooved siding, and the inside walls of the room for stabling the horses are lined with $\frac{7}{8}$ -inch tongued and grooved sheathing. The roof is covered with $\frac{7}{8}$ -inch sheathing and either Patent Roofing or shingles.

The prices quoted are for the buildings complete, Read-Cut, with all nails, flashings, building paper, door and window hardware, and in the case of buildings finished in wood, paint for two coats outside.

Separate prices are quoted in each case for stables finished with metal shingles and corrugated siding. The sheet metal is galvanized and does not require any paint.

STABLE.—16 ft. x 24 ft., fitted with two single stalls and with a 16 ft. x 12 ft. carriage room.

Price, finished in Wood . . .	\$355.50	Net Price \$337.73

Price, finished in Wood . . .	\$679.00	Net Price \$645.05
Price, finished in Metal . . .	783.00	Net Price 743.85

Hay Barns, Milk Houses, Steel Clad Granaries Hog Houses and Poultry Houses

If you are contemplating building any of the above farm buildings, or any farm buildings of any description, we will be very pleased to have an opportunity to figure on them, and can in all probability send some of our blue-prints, which will have many helpful suggestions for you.

Heart to Heart Talk

If you have read the first eleven pages of this book, you will have gathered the following facts about "Readi-Cut Houses."

1. When erected they are exactly like any other well designed and constructed houses.
2. A saw is practically unnecessary in the erection of them; we do the measuring, sawing, and fitting in our Mills by automatic machinery.
3. They will last for several generations—as long as any other well designed and constructed houses.
4. They eliminate waste of material.
5. They render skilled labor unnecessary, and reduce by half the time required for their erection.
6. You pay but one profit on them.
7. You know in advance what your complete house will cost and what it will look like.
8. You save much time and worry in getting a home.
9. You can do all the work of erecting, yourself, for we furnish full instructions and graphic illustrations.
10. You get a fine grade of finished material for the entire house, at less than the cost of the raw material otherwise.
11. **That the Sovereign System saves you one-third your money as shown by the experience of others.**

Naturally you are enthusiastic about it—you will probably tell your friends how good it looks—tell them of the many advantages of the system. In talking with them or asking advice of others, we suggest two things:—

1. Write down each question asked you which either you or this book cannot answer—make a note of any objection raised against the system, and pass those questions or objections up to us. We are eager for a chance to answer them.
2. Look for the motive behind the objection. Your intelligence will frequently find it.

Kindly ask us to send Booklets to any who are seeking information about the Sovereign "Readi-Cut" system, and we will be only too glad to supply them.

The system is simply exact Science applied to house building.

Scientific elimination of waste.

Scientific utilizing of every inch in the log.

Scientific salesmanship to eliminate unnecessary profits to useless middlemen.

Scientific management—planning the most direct route between the raw material and the consumer.

Not in any sense "Magic," just efficiency obtained by specializing.

We eliminate costs that add no value.

Our Aim

In advertising our system broadcast over the country, we have given to the public a Bond with which we dare not take liberties. We must fulfil every expectation that our advertising arouses, or lose part of our investment. We must keep up the quality; we must make the houses make good or we will lose our established reputation. We are legally responsible, and we desire to be morally responsible.

We handle only one grade of material—the best.

We have only one price—the lowest.

In time of war, prepare for peace.

Suppose you drop a few bombs on your prejudices, make a flank movement on precedent, mobilize your good intentions, and adopt the "Readi-Cut" way.

The Supreme Verdict—the Customer's Opinion!

Sovereign Construction Co., Ltd.

Toronto.

Gentlemen:-

The "Fairport" bungalow which you furnished me this spring, is entirely satisfactory in every respect, design, materials and all. Your system not only saved a busy man the time and trouble of looking after the erection, but I believe it saved me close on to \$400 in the cost of getting just what I wanted.

It will give me pleasure to commend your Company to any intending purchaser.

Yours truly,

Arthur Blight
